

Somalia Rainfall Forecast

Issued: 30 September 2019

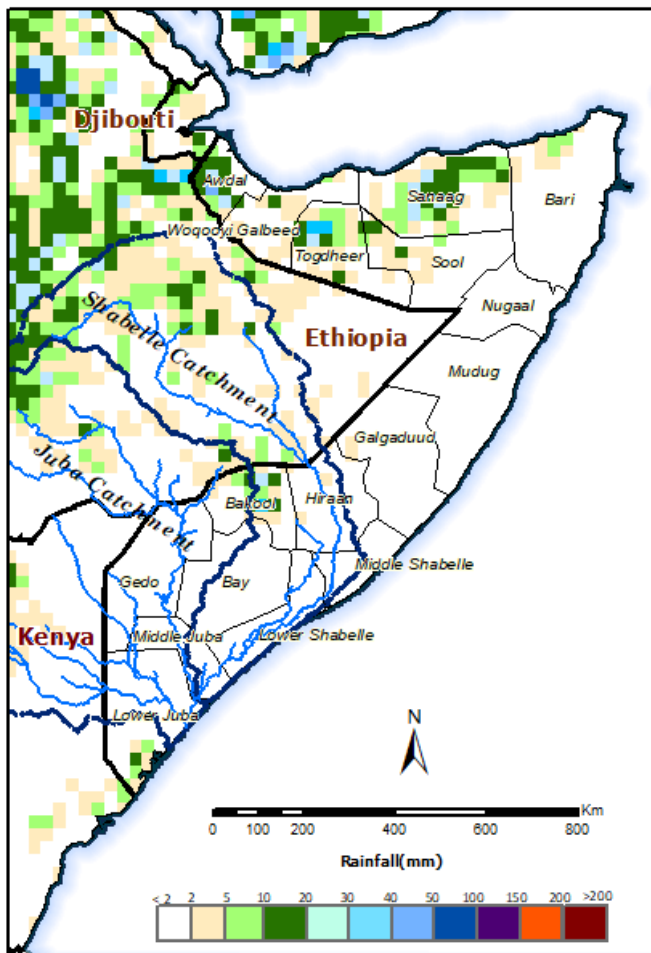

The cumulative rainfall forecast for the coming week (Map 1 & 2) indicates moderate rains in the northern areas and parts of South and central regions bordering Ethiopia. The upper parts of the Ethiopian highlands will also receive good rains during the week.

Given the rainfall forecast and the existing high river levels along the Shabelle, there remains a moderate risk of flooding in the middle reaches of the river. Areas to watch out for floods include Mahadey Weyne, Jowhar, and Balcad districts riverine areas where there exist several open river banks and weak river embankments.

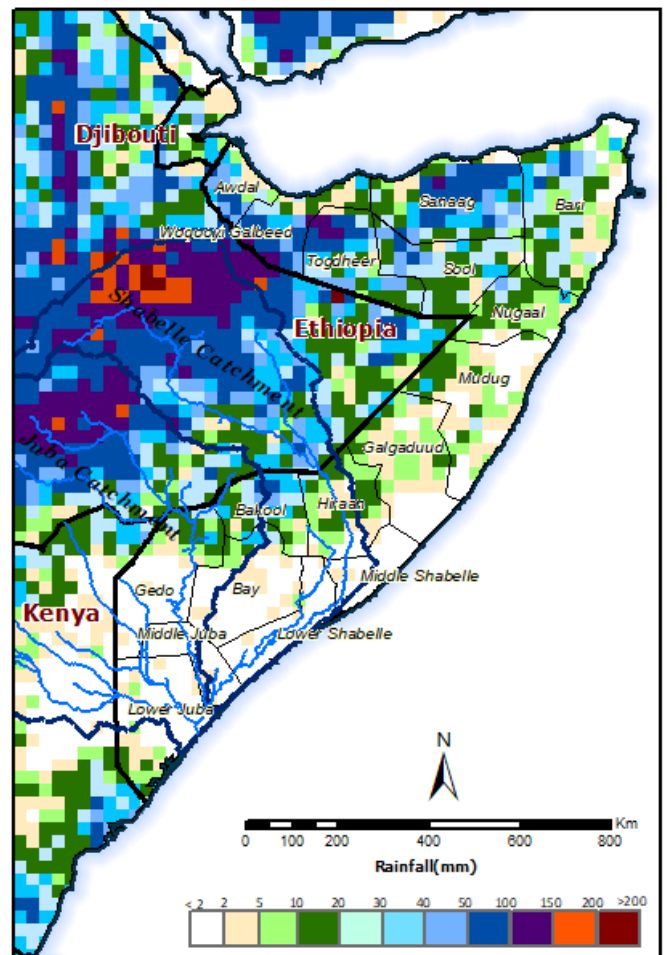

River levels along the Juba are expected to rise at the week with no risk of flooding.

Users are advised that this is a forecast and at times there may be discrepancies between estimates and actual amounts of rainfall received. Information on the forecast and observed river levels is updated daily and can be found on this link: <http://frrims.faoswalim.org>.

Map 1: 3 day cumulated rainfall forecast (30 Sept–02 Oct 2019)

Map 2: 7-day cumulated rainfall forecast (30 Sept–06 Oct 2019)
