

The last few days saw a reduction of rainfall activities across Somalia with most stations recording light or no rains. The Ethiopian highlands did not record any significant rains as well.

The rainfall forecast for the coming seven days is calling for a further reduction of rains in most areas except the southern most tip of the country in Lower Juba that will continue receive light rains. No rains are foreseen within the Ethiopian highlands in the coming seven days.

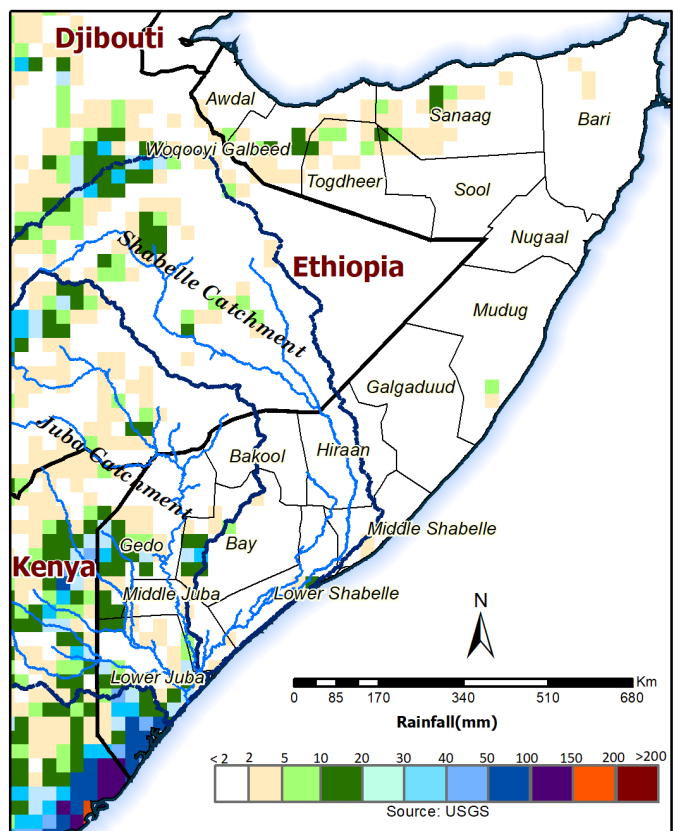

With no rains seen in the last few days, the river levels have dropped slightly and remain below normal at this time of the year. The trend is expected to continue until more rains are received in Mid April.

Users are advised that this is a forecast and at times there may be discrepancies between estimates and actual amounts of rainfall received. Information on the forecast and observed river levels is updated daily and can be found on this link: <http://frrims.faoswalim.org>.
