

# Somalia Rainfall Forecast

Food and Agriculture Organization of the United Nations

**Issued: 06 November 2018**

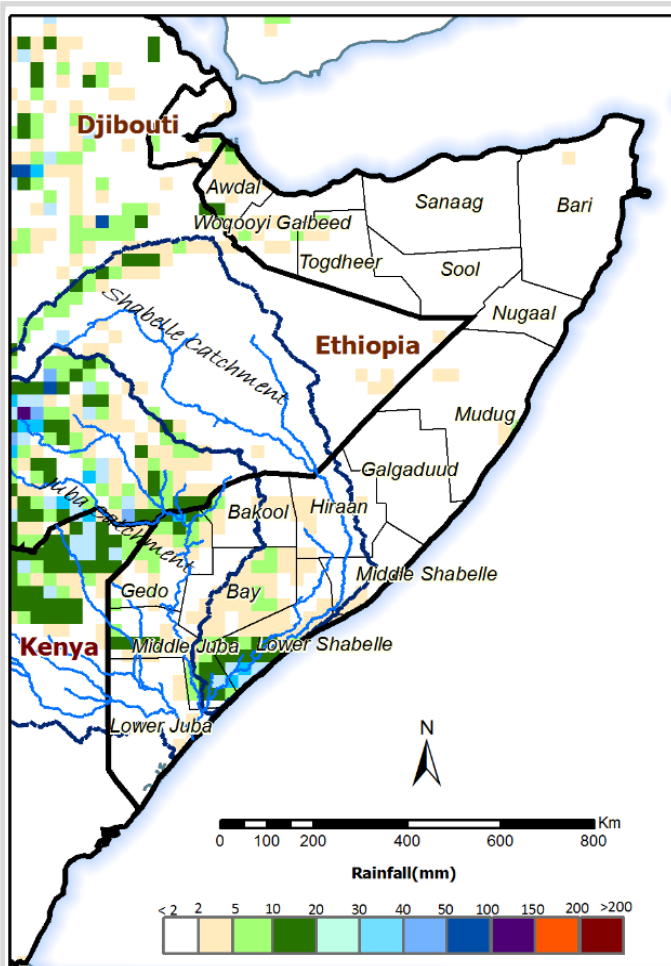

The Deyr 2018 rainy season continued to spread in space across the country with poor performance during the month of October. Some parts are yet to record any significant rains since the season begun.

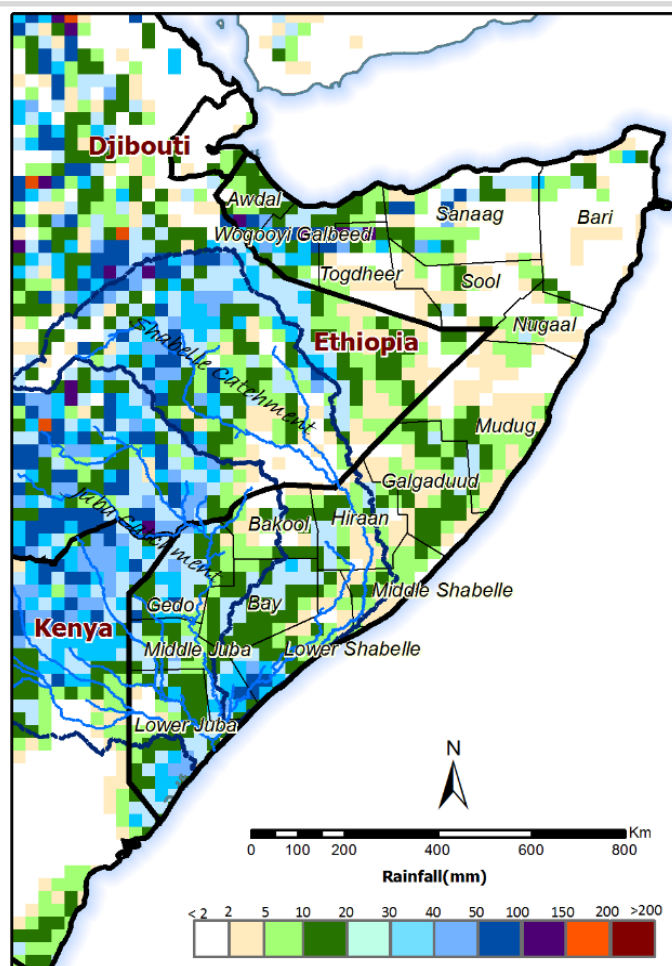

The rainfall forecast in Map 1 for the next three days is calling for light or no rains in the country. The rains are expected to increase towards the end of the week to moderate levels of up to 40mm in the southern regions, west of Somaliland and the Ethiopian highlands. Most of central regions, Puntland and East of Somaliland will remain dry during the week. This calls for concern and close monitoring of the situation especially in Puntland which is already experiencing moisture stress due to the suppressed rains.

Users are advised that this is a forecast and at times there may be discrepancies between forecast and actual amounts of rainfall received. The forecast, observed river levels and rainfall amounts are updated on a daily basis and can be found on this link: <http://frrims.faoswalim.org>

**Map 1: 3-day cumulated rainfall forecast (05 to 07 November 2018)**

**Map 2: 7-day cumulated rainfall forecast (05 to 11 November 2018)**
