

Somalia Rainfall Forecast

Food and Agriculture Organization of the United Nations

Issued: 14 November 2018

The rainfall forecast for the next seven days is calling for increased rains of up to 50–100 mm cumulative in the southern regions of Gedo, Middle Juba, Bay, Middle Shabelle, Lower Shabelle and Hiraaan. The Juba catchment in the Ethiopian highland is also expected to record moderate to heavy rains in the coming week. Somaliland, Puntland and central regions will remain dry during the week in review.

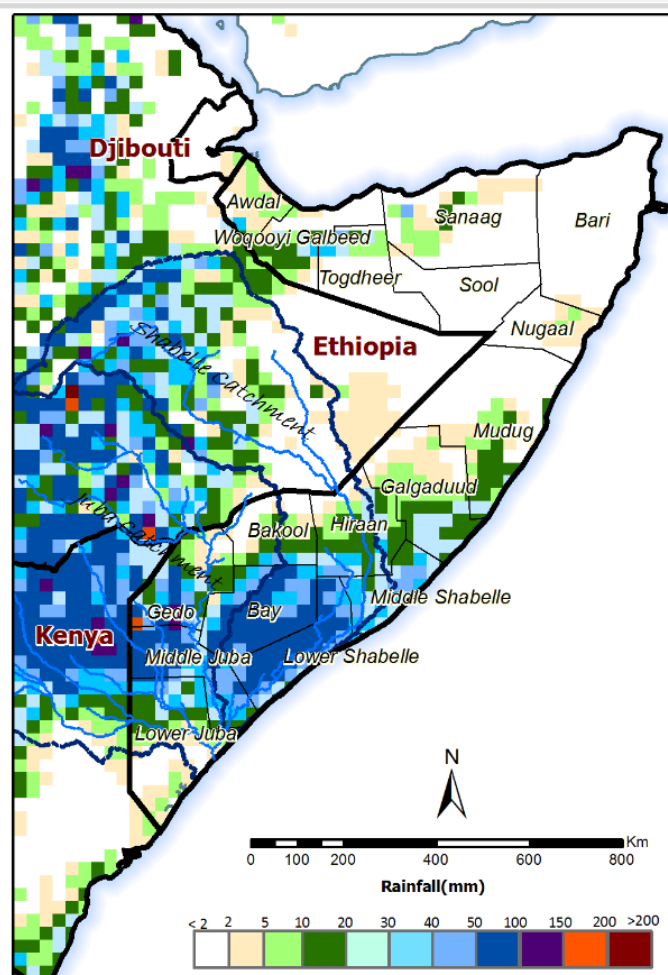

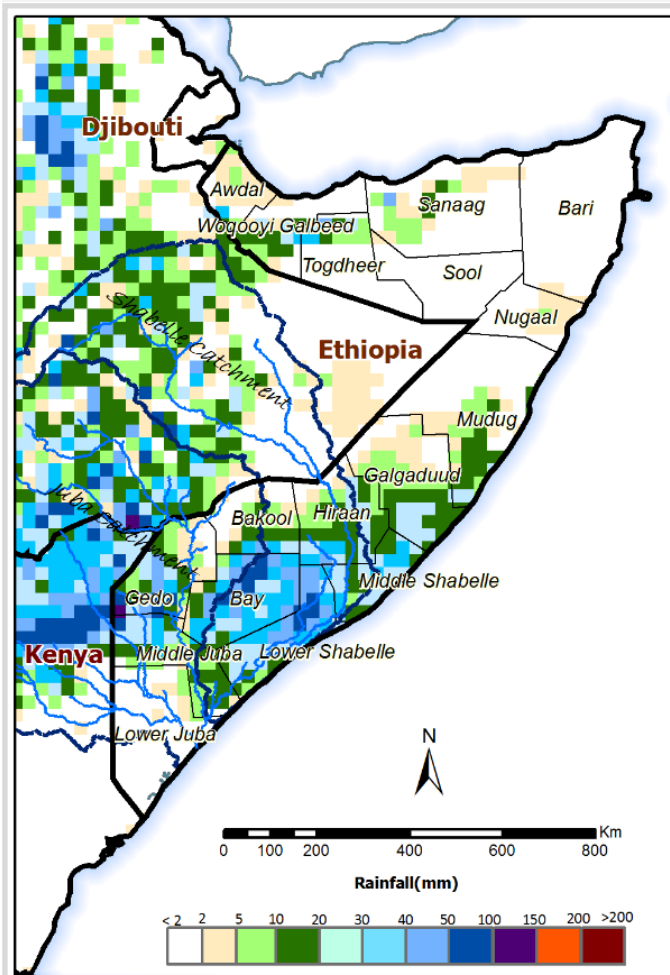

Given the rainfall forecast, river level along the Juba are expected to rise in the next few days with minimal risk of flooding.

There is a cause for concern in Puntland which has remained dry in the last two weeks. No rainfall is foreseen in this area in the coming week.

Users are advised that this is a forecast and at times there may be discrepancies between forecast and actual amounts of rainfall received. The forecast, observed river levels and rainfall amounts are updated on a daily basis and can be found on this link: <http://frrims.faoswalim.org>

Map 1: 3-day cumulated rainfall forecast (14 to 16 November 2018)

Map 2: 7-day cumulated rainfall forecast (14 to 20 November 2018)
