

Somalia Rainfall Forecast

Issued: 26 April 2017

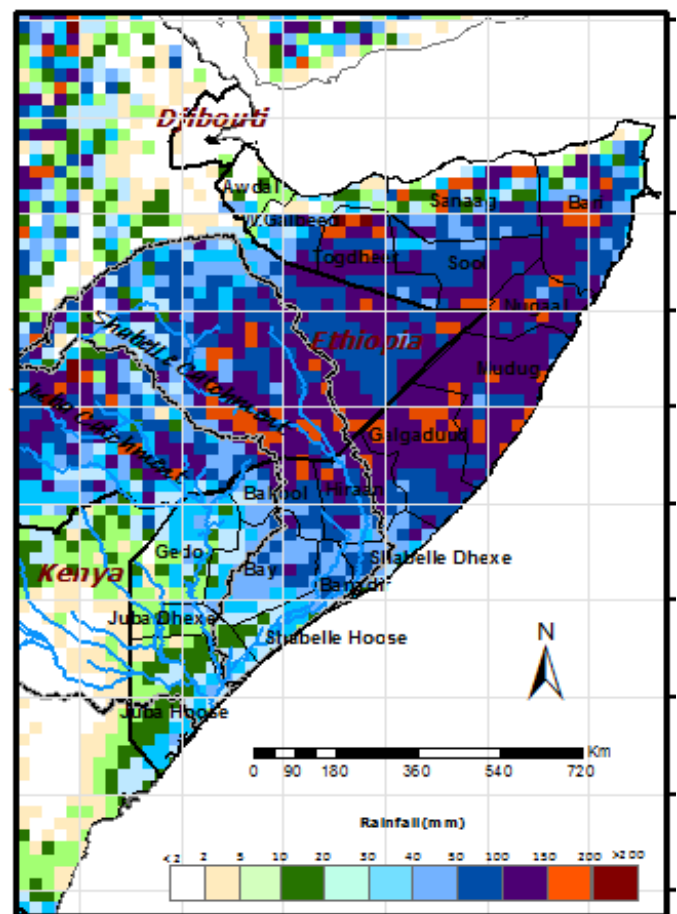

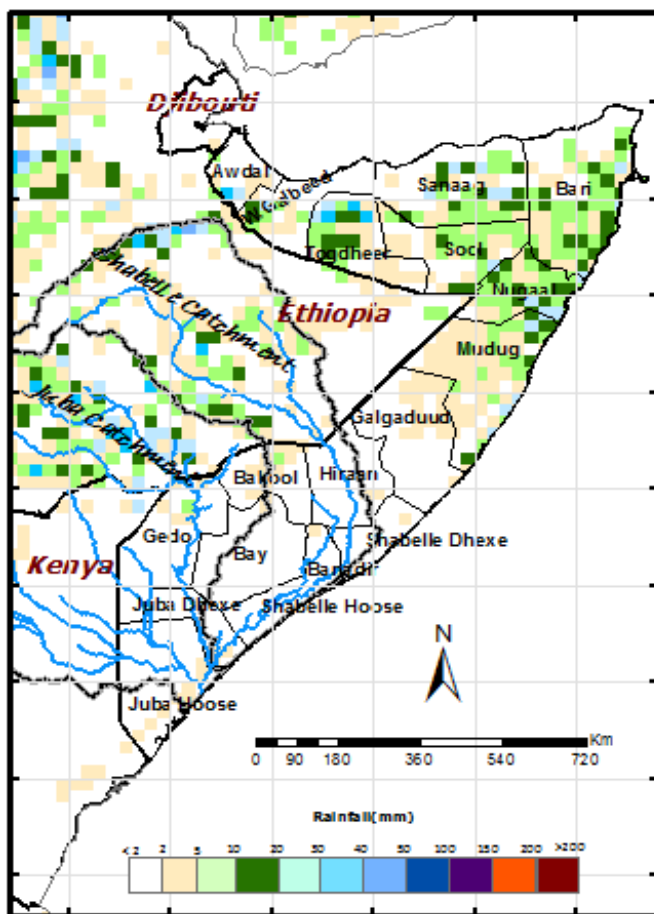

The rainfall forecast for the next 24 hours (Map 1) indicates light to moderate rains in parts of northern areas of the country especially in Togdheer, Sanag, Sool, Bari and Nugaal regions. Other parts of the country will remain dry within the day.

The cumulative rainfall forecast for the week which ends on 02 May 2017 (Map 2) shows moderate to heavy rains in most parts of the country including the Ethiopian highlands. Most of the rains are expected towards the end of the week. Given the forecast, cases of flash floods cannot be ruled out especially in the northern areas within the week. The river levels are also expected to rise given the forecast.

Users are advised that this is a forecast and at times there may be discrepancies between forecast and actual amounts of rainfall received. The forecast, observed river levels and rainfall amounts are updated on a daily basis and can be found in this link: <http://systems.faoso.net/frrims/>
