

Somalia Rainfall Forecast

Issued: 27 September 2019

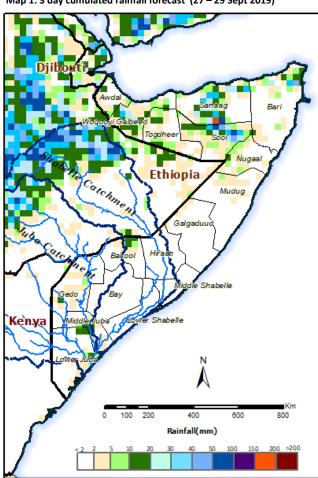

The Deyr 2019 rainy season (September-December) has kicked off in some parts of the country. Parts of the north eastern regions started to receive rains in mid-September. The last 24 hours also saw moderate rains in parts of the Gedo region in the south. The rains are expected to continue spreading in time and space during the coming weeks with the season scheduled to end in November and early December.

The cumulative rainfall forecast for the next three days (Map 1) indicates light to moderate rains in scattered areas of the country, especially within Sool and Sanaag regions. The rains will then spread further as the week progresses with more intensity in the northern areas. The upper parts of the Ethiopian highlands will also receive good rains towards the end of the week, as seen in Map 2. Most parts of the south and central areas will remain dry in the coming week.

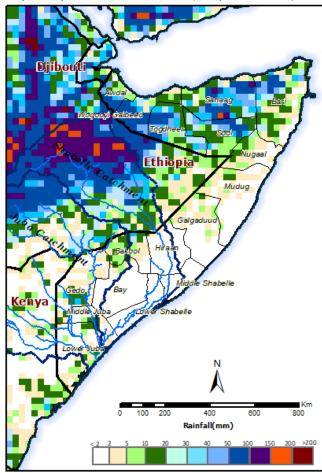

Given the rainfall forecast and the existing high river levels along the Shabelle, there is a moderate risk of flooding in the middle reaches of the river. Areas to watch out for floods include Mahadey Weyne, Jowhar, and Balcad districts riverine areas where there exist several open river banks and weak river embankments.

Users are advised that this is a forecast and at times there may be discrepancies between estimates and actual amounts of rainfall received. Information on the forecast and observed river levels is updated daily and can be found on this link: http:// frrims.faoswalim.org.

Map 1: 3 day cumulated rainfall forecast (27 - 29 Sept 2019)

Map 2: 7-day cumulated rainfall forecast (27 Sept - 03 Oct 2019)
